Summary: Principal PM with 12 years across engineering and product, five promotions in seven years at Microsoft, and a track record of building AI products from zero to one at enterprise scale. I build personalized AI experiences, partnering with applied scientists on relevance, evaluations, model efficiency to balance delight with trust, quality, and economic viability. I stay hands-on, building full-stack prototypes while leading user research and design, and have independently won Microsoft's org hackathon two years running. A former software engineer, I built an award-winning application for tracking surgeons' hand motions on laparoscopic simulators. I pair the agency of a builder with the judgment of a product leader, building cross-disciplinary relationships behind high-output teams.

Work Experience

Principal Product Manager-Agents and ML Feeds, Microsoft, Redmond — April 2019-Present

AI, ML and LLM innovation:

- Building the **Personal Engage Agent** from vision to launch by defining agent behaviors backed by research and evaluations, and aligning cross-functional teams (engineering, science, design) to deliver measurable gains in relevance and adoption.
- **Drove 50X growth** of M365 Copilot in Engage by delivering AI-powered features such as smart catch-up cards, entity awareness, contextual search, and writing assistance, while expanding access to broader data across Microsoft 365.
- Built AI-Assisted Answers, leveraging **RAG, deep semantic search** to surface enterprise knowledge, streamlining expert responses.
- Developed Teams-to-Engage bidirectional agent unifying knowledge sharing across platforms, **winning first prize at hackathon.**
- Architected **agentic M365 profile building** that generates AI-powered professional summaries, enhancing organizational visibility.
- Improved content sourcing in ML digest emails, **driving 160K MAU growth** and boosting user engagement metrics by **13%.**
- Launched LLM-based Intelligent Importer to generate Q&A from unstructured data, increasing questions by 40%. Also introduced an LLM-powered publishing feature that surfaced similar questions, increasing knowledge reuse by 35% and engagement by 15%.

Product growth and user engagement:

- Launched 'Articles', enabling rich long-form content creation, reaching **1M Monthly Active Users (MAU)** within two quarters.
- Revamped conversation model with threaded replies, feed sorting, improved notification, **driving 160% increase in replies**.
- Developed Engage Reactions through global user research, driving **25% QoQ** engagement growth across **20M users**.
- Pioneered Microsoft's first skin-tone diverse reactions feature, increasing **user sentiment scores by 18%.**
- Optimized user engagement through rigorous A/B testing, **driving 11% increase** in user-generated content.

Product launch and adoption:

- Led the launch of Answers in Viva, a social knowledge-sharing product, from concept to market in under 8 months.
- Migrated **10.7M MAUs** to the redesigned Engage experience by implementing end-user toggles and admin controls, and automated feedback channels.

Key achievements at Microsoft:

- Earned **five promotions in seven years** and Special Stock Awards by consistently exceeding expectations.
- **Won the hackathon two consecutive years**, independently **building full-stack end-to-end prototypes** that opened new product opportunities for Agents; earned both the Leadership Award and Most Popular Hack.

Technical Program Manager-Mobile Development, Bank of America, San Francisco — Feb 2017-April 2019

Led cross-functional delivery of mobile app releases, improving engineering throughput and shipping redesigned navigation flow

Key achievements at Bank of America:

- **Promoted within a year of joining the team**, for excellent execution on key projects
- Earned **two Global Recognition Awards** for impeccable program management quality and flawless execution
- Recognized as top performer during summer internship, ranking in the top 3% among 115 interns

Software Developer, L&T Infotech, Mumbai — Nov 2012-Feb 2015

- Developed products to analyze business intelligence data using devices like Kinect, Leap Motion, Google Glass.
- Won R&D's first development project from UK-based medical startup eoSurgical, bringing in revenue of $10,000.
- Independently developed **EoMetrics** solution for laparoscopic surgery simulators, that **captures and compares surgeons' hand motions**, subsequently tested and recommended by 100+ surgeons.

Key achievements at L&T Infotech:

- **Ranked #1 in All-India training program** among 500+ employees.
- Awarded "**Most Promising New Product**" at the **World Innovation Congress** (*EoMetrics*).
- Named "Best Project of the Year" by L&T Infotech (*EoMetrics*).
- Commended by eoSurgical for delivering a 100% bug-free solution.

Leadership Volunteer: Center Head and Educator, Make A Difference, Mumbai — June 2013-June 2015

- Led operations for Mumbai shelter homes, managing 30 teachers and the education of 123 underprivileged children.
- Optimized curriculum delivery, improving average student grades by 20%.

Education and skills

Duke University, Durham, NC-**Master of Engineering Management, GPA: 3.78/4.0** — Aug 2015-Dec 2016
Mumbai University, Mumbai, India- **Bachelor of Engineering in Computer Science, GPA: 3.80/4.0** — Aug 2008-Dec 2012
AI skills: AI full stack prototyping, Evals, Prompt engineering, Responsible AI processes, AI native product management
Other skills: C++, Java, C#, PowerBI, Tableau, SQL, A/B Testing and experimentation.
